DETAILED ACTION

Response to Amendment

- 1. Preliminary amendments to the specification and claims 1 and 6, and cancellation of claim 7, filed on June 18, 2007, have been entered in the above-identified application.
- 2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Request for Continued Examination

3. A Request for Continued Examination (RCE) under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on June 18, 2007 has been entered. An action on the RCE follows.

Application/Control Number: 10/790,017 Page 3

Claim Rejections - 35 USC § 103

4. Claims 6 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hattori et al. (U.S. Patent No. 5,958,565) in view of Stewart et al. (U.S. Patent No. 5,356,682) for the reasons of record as set forth in Paragraph No. 5 of the Office Action mailed on December 18, 2006; - and/or -

5. Claims 6 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hattori et al. (U.S. Patent No. 5,958,565) in view of Stewart et al. (U.S. Patent No. 5,356,682) and Ejiri et al. (U.S. Patent App. No. 2002/0068197 A1).

Hattori et al. and Stewart et al. are relied upon as described in Paragraph 5 of the Office Action mailed on December 18, 2006.

Regarding the amended language "wherein the magnetic tape has a curvature ... and said reference edge", the Examiner notes that this limitation was previously addressed as it pertained to prior claim 7.

Regarding the amended limitation(s) "wherein servo signals are recorded on said tracks" this is an intended use limitation and is not further limiting in so far as the structure of the product is concerned. Note that "in apparatus, article, and composition claims, intended use must result in a *structural difference* between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. *If the prior art structure is capable of performing the intended use, then it meets the claim.* In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art." [emphasis added] *In re Casey*, 370 F.2d 576, 152 USPQ 235 (CCPA 1967); *In re Otto*, 312 F.2d 937, 938,

136 USPQ 458, 459 (CCPA 1963). See MPEP § 2111.02. Specifically, the Examiner notes that the disclosed magnetic tape is clearly capable of having a wide variety of information stored on the tracks, from recorded data to servo tracking information. As such, since tracks possessing servo signals versus other type of recorded signals do not result in a macroscopic different in structure, the Examiner deems that the disclosed recording medium meets the claimed "intended use" limitations.

However, in the event that Applicants contend that "servo signals are recorded on said tracks" is not an intended use limitation and/or results in a structural difference, the Examiner notes that Ejiri et al. teach that it is known in the art to provide servo signals in the magnetic layer as servo tracks (i.e. to provide servo signals recorded on said servo tracks) (*Paragraphs 0001 – 0012*). The Examiner notes that such servo signals allow for good tracking of the magnetic head vis a vis the magnetic tape.

It would, therefore, have been obvious to one of ordinary skill in the art at the time of the Applicants' invention to modify the device of Hattori et al. in view of Stewart et al. to explicitly utilize servo signals recorded in said tracks as taught by Ejiri et al., since Ejiri et al. teach that it is known in the art to provide servo signals meeting Applicants' claimed limitations for achieving good tracking of the magnetic head vis a vis the magnetic tape.

Art Unit: 1773

Response to Arguments

6. The rejection of claims 6 and 8 under 35 U.S.C § 103(a) – Hattori et al. in view of various references

Applicant(s) arguments have been considered but are moot in view of the new ground(s) of rejection. In so far as they apply to the present rejection of record, the Examiner notes that all of Applicants' arguments have been extensively addressed in the advisory action mailed June 8, 2007.

Conclusion

7. Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Kevin M. Bernatz whose telephone number is (571) 272-1505. The Examiner can normally be reached on M-F, 8:30 AM - 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the Examiner's supervisor, Carol Chaney can be reached on (571) 272-1284. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
